

Reading 19: International Trade and Capital Flows

Question #1 of 61

Question ID: 413921

In the Ricardian model of trade, the source of comparative advantage is:

- X A) the difference between labor productivity and capital productivity.
- X B) capital productivity.
- ✓ C) labor productivity.

Explanation

The Ricardian model of trade only considers labor as a factor of production. Comparative advantage results from differences in labor productivity. Labor and capital inputs are both considered in the Heckscher-Ohlin model of trade.

Question #2 of 61

Question ID: 434252

The balance of payments accounts consist of:

- X A) capital account, financial account, and non-financial account.
- ✓ B) current account, capital account, and financial account.
- X C) current account, capital account, and currency account.

Explanation

According to the U.S. Federal Reserve, "The BOP [balance of payments] includes the current account, which mainly measures the flows of goods and services; the capital account, which consists of capital transfers and the acquisition and disposal of non-produced, non-financial assets; and the financial account, which records investment flows."

Question #3 of 61

Question ID: 726905

The table below outlines the possible tradeoffs of producing units of cloth and corn, using one hour of labor input, for Country A and Country B.

--	--	--

Country A		Country B	
Units of Cloth	Units of Corn	Units of Cloth	Units of Corn
14	4	16	8

Country A has a comparative advantage in producing:

- ✓ **A)** cloth.
- ✗ **B)** neither cloth nor corn.
- ✗ **C)** corn.

Explanation

To produce a unit of cloth, Country A must give up $4/14 = 0.29$ units of corn, while Country B must give up $8/16 = 0.50$ units of corn. Therefore Country A has a comparative advantage (i.e., a lower opportunity cost) in producing cloth.

To produce a unit of corn, Country A must give up $14/4 = 3.5$ units of cloth, while Country B must give up $16/8 = 2.0$ units of cloth. Therefore Country B has a comparative advantage in producing corn.

Note that this question gives output per unit of labor. In other questions you may see labor hours per unit of output. For this question that would be $1/14$ units of labor per unit of cloth and $1/4$ unit of labor per unit of corn for Country A, and $1/16$ unit of labor per unit of corn and $1/8$ unit of labor per unit of cloth for Country B. No matter how the data are presented, just focus on the trade-off, what each country must give up of one good to produce one unit of the other good.

Question #4 of 61

Question ID: 413906

Country P imports goods from Country Q. In the long run, the benefits of international trade *most likely* accrue to:

- ✗ **A)** Country P only.
- ✗ **B)** Country Q only.
- ✓ **C)** Both Country P and Country Q.

Explanation

The overall benefits of international trade are greater than the costs for the global economy as a whole. All countries should benefit in the long run as costs of international trade are mostly short run effects.

Question #5 of 61

Question ID: 434258

Promoting international monetary cooperation, promoting exchange stability, and assisting members experiencing balance of payments difficulties are the goals of the:

- ☐ A) World Trade Organization.
- ☒ B) International Monetary Fund.
- ☐ C) World Bank.

Explanation

The IMF's main goals are promoting international monetary cooperation; facilitating the expansion and balanced growth of international trade; promoting exchange stability; assisting in the establishment of a multilateral system of payments; and making resources available (with adequate safeguards) to members.

Question #7 of 61

Question ID: 413903

For a country that produces □100 million more income from foreign capital invested within the country than from domestic investment abroad, and produces □100 million more goods and services by foreign labor within the country than by its citizens abroad, gross national product is:

- ☒ A) less than gross domestic product.
- ☐ B) greater than gross domestic product.
- ☐ C) equal to gross domestic product.

Explanation

GNP measures output produced by a country's citizens and capital owned by its citizens. GDP measures output produced within a country. In this example, production within the country (GDP) is greater than production by the country's citizens (GNP).

Question #8 of 61

Question ID: 696229

For an analyst interested in measuring activity within an economy, the *most appropriate* measure to use is:

- ✓ **A)** gross domestic product.
- X **B)** national income.
- X **C)** gross national product.

Explanation

Gross domestic product measures the economic output produced within a country. Gross national product includes output produced by citizens working abroad and output from foreign productive assets owned by a country's citizens and does not include output produced within a country by foreign workers or from productive assets in the domestic economy owned by foreigners. GDP includes production to replace physical capital as it wears out; national income does not.

Question #9 of 61

Question ID: 413912

Suppose labor in Venezuela is less productive than labor in the United States in all areas of production. Which of the following statements about trading between Venezuela and the U.S. is *most* accurate?

- X **A)** Venezuela will not have a comparative advantage in any good.
- ✓ **B)** Both nations can benefit from trade.
- X **C)** Venezuela can benefit from trade but the U.S. cannot.

Explanation

Although one country may have an absolute advantage in all areas, trade is based on differences in opportunity costs, or comparative advantage. Any country will always have a comparative advantage in the production of some goods; thus, all countries can benefit from trade.

Question #12 of 61

Question ID: 445333

The *most* accurate description of the relative roles played by the International Monetary Fund, World Bank, and World Trade Organization is that the only one explicitly focused on:

- X **A)** expanding international trade is the World Trade Organization.
- ✓ **B)** reducing poverty is the World Bank.
- X **C)** providing funding to member nations is the International Monetary Fund.

Explanation

The World Bank has the explicit mission of fighting poverty. Both the WTO and IMF work to expand international trade. Both the World Bank and IMF provide funds to member nations, the World Bank for development and the IMF when member nations experience balance of payments difficulties.

Question #13 of 61

Question ID: 413945

The primary goals of the International Monetary Fund (IMF) include:

- ✓ **A)** promoting exchange rate stability.
- X **B)** reducing global poverty.
- X **C)** resolving trade-related disputes among nations.

Explanation

The primary goals of the IMF are to promote international monetary cooperation, facilitate growth of international trade, promote exchange rate stability, assist in establishing a multilateral payment system, and provide resources to members with balance of payments difficulties. Reducing global poverty is a role of the World Bank. Resolving trade disputes is a role of the World Trade Organization.

-

Question #16 of 61

Question ID: 413937

The form of regional trading agreement (RTA) *least likely* to have the unintended negative effect of reducing a member country's low-cost imports from a non-member country is a:

- ☒ A) free trade area.
- ☐ B) common market.
- ☐ C) customs union.

Explanation

A free trade area removes barriers to trade among its members but does not require any of its members to change their trade policies with non-members. A common market and a customs union both impose uniformity on trade rules with non-member nations, which could restrict a member's low-cost imports from a nation that is not a member.

Question #18 of 61

Question ID: 413939

In the context of international trading blocs, the primary feature of an economic union that distinguishes it from a common market is the adoption of a common:

- X **A)** set of trade restrictions with non-members.
- ✓ **B)** set of economic policies.
- X **C)** currency.

Explanation

An economic union is a common market that has also adopted common institutions and economic policy. Both common markets and economic unions adopt a common set of trade restrictions with non-members. Neither requires the adoption of a common currency, which is a characteristic of a monetary union.

Question #19 of 61

Question ID: 413914

The law of comparative advantage explains why a nation will benefit from trade when it:

- X **A)** exports more than it imports.

- ✓ **B)** exports goods for which it is a low-cost producer, while importing those for which it is a high-cost producer.
- X **C)** exports goods for which it is a high-cost producer, while importing those for which it is a low-cost producer.

Explanation

Comparative advantage is the ability to produce a good at a lower opportunity cost than others can produce it. When trading partners specialize in producing products for which they have a comparative advantage; costs are minimized, output is greater, and both trading partners benefit.

Question #21 of 61

Question ID: 413943

In a country that has a current account surplus, it is *most likely* that:

- X **A)** private domestic savings are greater than the budget deficit.
- X **B)** domestic investment is greater than government savings.
- ✓ **C)** domestic savings are greater than domestic investment.

Explanation

The relationship between saving, investment, and the trade deficit can be expressed as:

$(\text{exports} - \text{imports}) = \text{private savings} + \text{government savings} - \text{investment}$

A country will have a current account surplus (exports > imports) if the sum of domestic private savings and government savings is greater than domestic investment, or a current account deficit (imports > exports) if the sum of domestic private savings and government savings is less than domestic investment.

Question #26 of 61

Question ID: 413915

According to the law of comparative advantage:

- X **A)** if a foreign government subsidizes the textile industry, the domestic government should impose a tariff.
- X **B)** Mexico is considered to have a comparative advantage in plastics if Mexico can produce plastic using fewer resources than the U.S.

- ✓ **C)** a nation will benefit from trade when it imports goods for which it is the high cost producer and exports goods for which it is the low-cost producer.

Explanation

This statement is the law of comparative advantage.

The other choices are incorrect. The law of comparative advantage supports international trade. According to the law of comparative advantage, both trading partners are better off if they specialize in the production of goods for which they are the low-opportunity cost producer and trade for those goods for which they are the high-opportunity cost producer. Mexico is considered to have *an absolute* advantage in plastics if Mexico can produce plastic using fewer resources than the U.S.

Question #32 of 61

Question ID: 413918

The following chart indicates the production possibilities of food and drink per day in Country A and Country B.

	Units of Output Per Day	
	Country A	Country B
Food	9	5
Drink	7	5

Which of the following statements is *most* accurate?

- X **A)** Since B workers can produce more of food and drink than A workers, no gains from trade are possible.
- ✓ **B)** Mutual gains could be realized from trade if A specialized in food production and B specialized in drink production.
- X **C)** Mutual gains could be realized from trade if A specialized in drink production and B specialized in the food production.

Explanation

Mutual gains could be realized from trade if A specialized in food production and B specialized in drink production. The reason centers on comparative advantage. Country A must give up 7/9th unit of drink to produce one unit of food. Country B must give up 1 unit of drink to produce one unit of food. Therefore, the opportunity cost of producing food is greater for B than for A. If B produces 5 units of drink and A

produces 9 units of food, total production will be greater than it would be if both countries produced both goods. By trading, both countries benefit.

Question #33 of 61

Question ID: 485768

Two countries trade freely with each other and have agreed to specific tariffs on imports from other countries. The workers in either country may freely cross the common border to work in the other country. The two countries have agreed to common economic policies, but they use separate currencies. This type of cooperation is *best* described as a(n):

- ✓ **A)** economic union.
- X **B)** monetary union.
- X **C)** customs union.

Explanation

The two countries are a part of an economic union. In an economic union, there is (1) free trade among members, (2) common restrictions (tariffs) on imports from non-members, (3) free movement of production factors (labor), and (4) common economic institutions and coordination of economic policies. While a customs union has common tariffs on imports from non-union countries and free trade, it does not allow workers to cross the borders freely and does not have common economic institutions. A monetary union requires all of the listed items and a common currency.

Question #35 of 61

Question ID: 494898

The table below outlines the possible output per unit of labor input of producing beer and cheese for Germany and Holland.

<i>Germany</i>		<i>Holland</i>	
<i>Cheese</i>	<i>Beer</i>	<i>Cheese</i>	<i>Beer</i>
5	10	4	6

Which of the following statements is *most* accurate?

- ✓ **A)** Both countries would gain if Germany traded beer for Holland's cheese.
- X **B)** Germany would not gain from trade, because it has an absolute advantage in the production of both goods.
- X **C)** Both countries would gain if Germany traded cheese for Holland's beer.

Explanation

Germany has an absolute advantage in both beer and cheese because it can produce more of both per unit of labor input than Holland. The opportunity cost of producing beer is $5/10 = 0.5$ in Germany and $4/6 = 0.67$ in Holland. The opportunity cost of producing cheese is $10/5 = 2$ in Germany and $6/4 = 1.5$ in Holland. Holland has a comparative advantage in producing cheese and Germany has a comparative advantage in producing beer. Both countries can gain if Germany trades beer for Holland's cheese.

An anti-dumping restriction on trade:

- ✓ **A)** prohibits foreign firms from selling products below cost to gain market share.
- X **B)** keeps some highly sensitive products in the country.
- X **C)** protects infant industries.

Explanation

Firms dump their goods at a price lower than cost in order to drive out the competition. Once this is complete, they will be able to raise prices to much higher levels in order to gain abnormal profits. Of course, once prices are increased, new competitors may arise.

Question #46 of 61

Question ID: 413911

The following chart indicates the production possibilities of food and drink per day in Country A and Country B.

	<i>Units of Output Per Day</i>	
	<i>Country A</i>	<i>Country B</i>
Food	4	8
Drink	6	7

Which of the following statements about the chart is *most* accurate?

- X **A)** Since B workers can produce more of food and drink than A workers, no gains from trade are possible.
- ✓ **B)** Mutual gains could be realized from trade if A specialized in drink production and B specialized in the food production.
- X **C)** Mutual gains could be realized from trade if A specialized in food production and B specialized in drink production.

Explanation

Mutual gains could be realized from trade if A specialized in drink production and B specialized in food production. The reason centers on comparative advantage. Country A must give up 1.5 units of drink to produce one unit of food. Country B must give up 0.875 units of drink to produce one unit of food. Therefore, the opportunity cost of producing food is greater for A than for B. If B produces 8 units of food and A produces 6 units of drink, total production will be greater than it would be if both countries produced both goods. By trading, both countries benefit.

Question ID: 413920

The source of comparative advantage in the Heckscher-Ohlin model of trade is differences among countries in:

- X **A)** labor productivity.
- X **B)** technological advancement.
- ✓ **C)** relative scarcity of labor and capital.

Explanation

In the Heckscher-Ohlin model of trade, the source of comparative advantage is the relative scarcity of labor and capital in each country.

Question #48 of 61

Question ID: 413927

David Forsythe and Linda Novak are discussing the advantages and disadvantages of import restrictions. They state the following:

Forsythe: One of the groups that benefits from import restrictions is often the government that imposes them.

Novak: Import restrictions impose costs on specific groups, such as the country's import industries, but these costs are more than offset by the benefits to other groups and to the economy as a whole.

With respect to these statements:

- X **A)** both are correct.
- X **B)** both are incorrect.
- ✓ **C)** only one is correct.

Explanation

Forsythe is correct. A primary reason why trade restrictions remain widespread is the revenue that governments receive from tariffs. Novak is incorrect. Trade restrictions benefit specific groups, such as workers in the protected industries, but those benefits are most often less than the costs imposed on consumers and other industries as a whole.

Question #49 of 61

Question ID: 413930

Which of the following arguments in favor of trade restrictions is *least likely* to be supported by economists?

- ✓ **A)** Trade with low-wage countries depresses wage rates in high-wage countries.
- X **B)** Infant industries should be protected.
- X **C)** National defense industries should be protected.

Explanation

Trade with low-wage countries does not in itself depress wage rates since productivity must be considered. The other arguments have some support among economists.

Question #50 of 61

Question ID: 413913

The law of comparative advantage holds that trading partners can be made better off if they:

- ✓ **A)** specialize in production of goods for which they are the low opportunity cost producer.
- X **B)** specialize in production of goods for which they are the low exchange rate adjusted producer.

- X **C)** import those goods for which they have a comparative advantage.

Explanation

The law of comparative advantage holds that trading partners can be made better off if they specialize in production of goods for which they are the low opportunity cost producer. They should export, not import, goods for which they have a comparative advantage. Absolute and exchange rate adjusted costs are not relevant to the concept of comparative advantage.

Question ID: 434257

Government-owned assets abroad and foreign-owned assets in the country are included in which of the balance of payments accounts?

- X **A)** Current account.
- X **B)** Capital account.
- ✓ **C)** Financial account.

Explanation

Government-owned assets abroad and foreign-owned assets in the country are sub-accounts of the financial account.

Question ID: 413907

Which of the following statements about the costs and benefits of international trade is *most* accurate?

- ✓ **A)** The costs of trade primarily affect those in domestic industries that compete with imports.
- X **B)** The costs of trade are greater than the benefits with regard to domestic employment.
- X **C)** Increased international trade benefits all groups in the trading countries.

Explanation

The benefits of trade are greater than the costs for the overall economy, but those in domestic industries competing with imports may suffer costs in the form of reduced profits or employment.

Question #53 of 61

Question ID: 413929

Which of the following groups in the country of Minidonia would *least likely* be helped by the imposition of tariffs on Minidonian imports of transportation equipment?

- ☐ A) Minidonia's government.
- ☐ B) Automotive manufacturers.
- ☒ C) Trucking companies.

Explanation

Tariffs on transportation equipment benefit the government in the form of tariff revenue, and benefit domestic producers and industry workers in the form of higher prices for transportation equipment. The users of transportation equipment, such as trucking companies, suffer from higher costs due to the higher prices of transportation equipment.

Question ID: 413942

Other things equal, a current account deficit will tend to narrow if:

- ☐ A) taxes decrease.
- ☒ B) domestic investment decreases.
- ☐ C) private savings decrease.

Explanation

The relation between the trade deficit (the current account), savings (both private and government) and domestic investments is stated as $(X - M) = \text{private savings} + \text{government savings} - \text{investment}$. A current account deficit will tend to narrow if private savings increase, government savings increase (either taxes increase or government spending decreases), or domestic investment decreases.

Question #55 of 61

A government that wishes to reduce the volatility of domestic asset prices and protect domestic industries is *most likely* to:

- ☐ A) participate in regional trading agreements.
- ☒ B) impose capital restrictions.
- ☐ C) adopt voluntary export restraints.

Explanation

Objectives commonly cited for imposing capital restrictions include reducing the volatility of domestic asset prices, protecting domestic industries, maintaining fixed exchange rates, and keeping domestic interest rates low.

Question #56 of 61

Question ID: 413932

Who benefits the *most* from a quota?

- ☐ A) Foreign producers.
- ☒ B) Domestic producers.
- ☐ C) Foreign consumers.

Explanation

Quotas restrict the supply of imported goods, which increases the price domestically benefiting domestic producers. Some foreign producers also benefit from the higher prices created by the quota if they receive the revenue transfer (due to higher prices received for all goods sold under the import license). However, overall the foreign producers do not sell as much of their product and have lost revenues.

Question ID: 413938

The North American Free Trade Agreement (NAFTA) is *most accurately* described as a:

- ☒ A) free trade area.
- ☐ B) common market.
- ☐ C) customs union.

Explanation

NAFTA is a free trade area, in which the member nations remove barriers to imports and exports among themselves. In a customs union, all members adopt common trade policies with non-members. A common market goes further, removing all barriers to movement of labor and capital among members.

Question #58 of 61

Question ID: 413925

Suppose the world price of Mercury tennis shoes is \$60, but they sell in the U.S. for \$75 due to a \$15 import tariff. Who will *most likely* be negatively affected by the tariff?

- ☐ A) Foreign consumers.
- ☐ B) Producers.
- ☒ C) U.S. consumers.

Explanation

Tariffs benefit domestic producers of products because the level of imports will be reduced due to an effective increase in the price of the goods. Consumers in the country lose due to higher prices.

Question ID: 413905

In contrast to gross domestic product (GDP), gross national product (GNP) includes income earned by:

- ☐ A) foreign capital invested domestically.
- ☐ B) foreign labor working domestically.
- ☒ C) domestic capital invested abroad.

Explanation

GNP includes goods and services produced outside the country by domestic factors of production, both labor and capital.

Question #60 of 61

Question ID: 413933

Prior to the beginning of summer, the government of Japan places a 150 percent tariff on imported chain saws. Assume for this example that this tariff has a significant impact on the supply of chain saws. The government's action:

- X **A)** is more harmful than if the government had limited the amount of chain saws imported.
- X **B)** will protect the jobs and high wages of Japanese chain saw industry workers.
- ✓ **C)** benefits the Japanese government and domestic producers.

Explanation

The Japanese government's action is an example of a *tariff*. A tariff is a tax imposed on imports and benefits the Japanese government because it collects the tariff. Domestic producers benefit because the reduction in the supply of imported goods means a higher domestic price.

The other choices are incorrect. A tariff is considered *less* harmful than a quota (an import quantity limitation) because under a quota, the domestic government does *not* receive any funds as it would under a tariff (the foreign producers receive the revenue transfer). In the long run, trade restrictions do not protect the net number of jobs in the country. The number of jobs protected by import restrictions will be offset by jobs lost in the import/export industry. Import/export firms will be unable to sell the overpriced domestic products abroad or import and sell the lower priced restricted foreign-made product.

Question #61 of 61

Question ID: 413922

In the context of foreign trade, quotas are *best* described as:

- ✓ **A)** limits on the amounts of imports a country allows over some period.
- X **B)** government payments to firms that export goods.
- X **C)** taxes on imported goods collected by the government.

Explanation

Quotas are limits on the amounts of imports allowed into a country in a period of time. Government payments to firms that export goods are known as export subsidies. Taxes on imported goods collected by the government are known as tariffs.
