Question #1 of 74

A bond that pays $100 in interest each year was purchased at the beginning of the year for $1,050 and sold at the end of the year for $1,100. An investor's holding period return is:

A) 14.3%.

B) 10.0%.

C) 10.5%.

Question #2 of 74

Which of the following is *least likely* a problem associated with the internal rate of return (IRR) method for making investment decisions?

A) An investment project may have more than one internal rate of return.

B) IRR and NPV criteria can give conflicting decisions for mutually exclusive projects.

C) The IRR method determines the discount rate that sets the net present value of a project equal to zero.

Question #3 of 74

Why is the time-weighted rate of return the preferred method of performance measurement?

A) Time weighted allows for inter-period measurement and therefore is more flexible in determining exactly how a portfolio performed during a specific interval of time.

B) Time-weighted returns are not influenced by the timing of cash flows.

C) There is no preference for time-weighted versus money-weighted.

Question #4 of 74

An investor makes the following investments:

- She purchases a share of stock for $50.00.
- After one year, she purchases an additional share for $75.00.
- After one more year, she sells both shares for $100.00 each.
- There are no transaction costs or taxes.

During year one, the stock paid a $5.00 per share dividend. In year 2, the stock paid a $7.50 per share dividend. The investor's required return is 35%. Her money-weighted return is *closest to*:

A) -7.5%.

B) 16.1%.

C) 48.9%.

Question #5 of 74

A Treasury bill (T-bill) with a face value of $10,000 and 219 days until maturity is selling for 97.375% of face value. Which of the following is *closest* to the holding period yield on the T-bill if held until maturity?

A) 2.63%.

B) 2.81%.

C) 2.70%.

Question #6 of 74

A T-bill with a face value of $100,000 and 140 days until maturity is selling for $98,000. What is the effective annual yield (EAY)?

A) 5.41%.

B) 5.14%.

C) 2.04%.

Question #7 of 74

If the money market yield is 3.792% on a T-bill with 79 days to maturity, what is the holding period yield?

A) 0.83%.

B) 0.89%.

C) 0.77%.

Question #8 of 74

An investor has just purchased a Treasury bill for $99,400. If the security matures in 40 days and has a holding period yield of 0.604%, what is its money market yield?

A) 5.650%.

B) 5.436%.

C) 5.512%.

Question #9 of 74

The financial manager at IBFM, a farm implement distributor, is contemplating the following three mutually exclusive projects. IBFM's required rate of return is 9.5%. Based on the information provided, which should the financial manager select and why?

Project	Investment at t = 0	Cash Flow at t = 1	IRR	NPV @ 9.5%
A	$10,000	$11,300	13.00	$320
B	$25,000	$29,000	16.00	$1,484
C	$35,000	$40,250	15.00	$1,758

A) All of the projects, because they all earn more than 9.5%.

B) Project A with the lowest initial investment.

C) Project C with the highest net present value.

Question #10 of 74

A T-bill with a face value of $100,000 and 140 days until maturity is selling for $98,000. What is the bank discount yield?

A) 5.41%.

B) 4.18%.

C) 5.14%.

Question #11 of 74

A Treasury bill has 90 days until its maturity and a holding period yield of 3.17%. Its effective annual yield is *closest* to:

A) 13.30%.

B) 12.68%.

C) 13.49%.

Question #12 of 74

The internal rate of return (IRR) method and net present value (NPV) method of project selection will always provide the same accept or reject decision when:

A) the projects are mutually exclusive.

B) the projects are independent.

C) up-front project costs are under $1.0 million.

Question #13 of 74

In order to calculate the net present value (NPV) of a project, an analyst would *least likely* need to know the:

A) opportunity cost of capital for the project.

B) timing of the expected cash flows from the project.

C) internal rate of return (IRR) of the project.

Question #14 of 74

Sarah Kelley, CFA, is analyzing two mutually exclusive investment projects. Kelley has calculated the net present value (NPV) and internal rate of return (IRR) for each project:

Project 1: NPV = $230; IRR = 15%

Project 2: NPV = $4,000; IRR = 6%

Kelley should make which of the following recommendations concerning the two projects?

A) Accept both projects.

B) Accept Project 1 only.

C) Accept Project 2 only.

Question #15 of 74

An investor sold a 30-year bond at a price of $850 after he purchased it at $800 a year ago. He received $50 of interest at the time of the sale. The annualized holding period return is:

A) 12.5%.

B) 15.0%.

C) 6.25%.

Question #16 of 74

An investment with a cost of $5,000 is expected to have cash inflows of $3,000 in year 1, and $4,000 in year 2. The internal rate of return (IRR) for this investment is *closest* to:

A) 15%.

B) 25%.

C) 30%.

Question #17 of 74

An investor buys a share of stock for $200.00 at time t = 0. At time t = 1, the investor buys an additional share for $225.00. At time t = 2 the investor sells both shares for $235.00. During both years, the stock paid a per share dividend of $5.00. What are the *approximate* time-weighted and money-weighted returns respectively?

A) 9.0%; 15.0%.

B) 7.7%; 7.7%.

C) 10.8%; 9.4%.

Question #18 of 74

Financial managers should always select the project that provides the highest net present value (NPV) whenever NPV and IRR methods conflict, because maximizing:

A) the shareholders' rate of return is the goal of financial management.

B) shareholder wealth is the goal of financial management.

C) revenues is the goal of financial management.

Question #19 of 74

The effective annual yield for an investment is 10%. What is the yield for this investment on a bond-equivalent basis?

A) 10.00%.

B) 9.76%.

C) 4.88%.

Question #20 of 74

An investor started the year with a $10,000 portfolio. He made a $1,000 contribution at the end of the first quarter, a $2,000 withdrawal at the end of the third quarter, and ended the year with a portfolio value of $10,553. The quarterly holding period returns for the investor's portfolio are as follows.

Q1	Q2	Q3	Q4
3%	-5%	8%	10%

The effective annual money-weighted and time-weighted returns are *closest to*:

	Money-weighted	Time-weighted
A)	15.13%	16.25%

B) 15.13% 3.84%

C) 3.59% 16.25%

Question #21 of 74

The financial manager at Genesis Company is looking into the purchase of an apartment complex for $550,000. Net after-tax cash flows are expected to be $65,000 for each of the next five years, then drop to $50,000 for four years. Genesis' required rate of return is 9% on projects of this nature. After nine years, Genesis Company expects to sell the property for after-tax proceeds of $300,000. What is the respective internal rate of return (IRR) and net present value (NPV) on this project?

A) 13.99%; $166,177.

B) 7.01%; –$53,765.

C) 6.66%; –$64,170.

Question #22 of 74

The capital budgeting director of Green Manufacturing is evaluating a laser imaging project with the following characteristics:

- Cost: $150,000
- Expected life: 3 years
- After-tax cash flows: $60,317 per year
- Salvage value: $0

If Green Manufacturing's cost of capital is 11.5%, what is the project's internal rate of return (IRR)?

A) 10.0%.

B) $3,875.00

C) 13.6%.

Question #23 of 74

Which of the following statements regarding making investment decisions using net present value (NPV) and internal rate of return (IRR) is *least* accurate?

A) If two projects are mutually exclusive, one should always choose the project with the highest IRR.

B) If a firm undertakes a zero-NPV project, the firm will get larger, but shareholder wealth will not change.

C) Projects with a positive NPVs increase shareholder wealth.

Question #24 of 74

Which of the following statements regarding the money-weighted and time-weighted rates of return is *least* accurate?

A) The time-weighted rate of return is the standard in the investment management industry.

B) The time-weighted rate of return reflects the compound rate of growth of one unit of currency over a stated measurement period.

C) The money-weighted rate of return removes the effects of the timing of additions and withdrawals to a portfolio.

Question #25 of 74

A Treasury bill (T-bill) with 38 days until maturity has a bank discount yield of 3.82%. Which of the following is *closest* to the money market yield on the T-bill?

A) 3.87%.

B) 3.84%.

C) 3.81%.

Question #26 of 74

Time-weighted returns are used by the investment management industry because they:

A) are not affected by the timing of cash flows.

B) result in higher returns versus the money-weighted return calculation.

C) take all cash inflows and outflows into account using the internal rate of return.

Question #27 of 74

What should an analyst recommend based on the following information for two mutually exclusive projects?

Project	Investment at t = 0	Cash Flow at t = 1	IRR	NPV at 12%
X	–$3,000	$5,000	66.67%	$1,464.29
Y	–$10,000	$15,000	50.00%	$3,392.86

A) Accept X and reject Y.

B) Accept X and accept Y.

C) Reject X and accept Y.

Question #28 of 74

The financial manager at Johnson & Smith estimates that its required rate of return is 11%. Which of the following independent projects should Johnson & Smith accept?

A) Project B requires an up-front expenditure of $800,000 and generates a positive IRR of 10.5%.

B) Project A requires an up-front expenditure of $1,000,000 and generates an NPV of -$4,600.

C) Project C requires an up-front expenditure of $600,000 and generates a positive internal rate of return of 12.0%.

Question #29 of 74

The money-weighted return also is known as the:

A) return on invested capital.

B) internal rate of return (IRR) of a portfolio.

C) measure of the compound rate of growth of $1 over a stated measurement period.

Question #30 of 74

The bank discount of a $1,000,000 T-bill with 135 days until maturity that is currently selling for $979,000 is:

A) 5.6%.

B) 6.1%.

C) 5.8%.

Question #31 of 74

A Treasury bill (T-bill) with a face value of $10,000 and 44 days until maturity has a holding period yield of 1.1247%. Which of the following is *closest* to the effective annual yield on the T-bill?

A) 8.76%.

B) 12.47%.

C) 9.72%.

Question #32 of 74

A Treasury bill, with 45 days until maturity, has an effective annual yield of 12.50%. The bill's holding period yield is *closest* to:

A) 1.57%.

B) 1.46%.

C) 1.54%.

Question #33 of 74

Calabash Crab House is considering an investment in mutually exclusive kitchen-upgrade projects with the following cash flows:

	Project A	*Project B*
Initial Year	-$10,000	-$9,000
Year 1	2,000	200
Year 2	5,000	-2,000
Year 3	8,000	11,000
Year 4	8,000	15,000

Assuming Calabash has a 12.5% cost of capital, which of the following investment decisions is *most* appropriate?

A) Accept Project A because its internal rate of return is higher than that of Project B.

B) Accept Project B because its net present value is higher than that of Project A.

C) Accept both projects because they both have positive net present values.

Question #34 of 74

Should a company accept a project that has an IRR of 14% and an NPV of $2.8 million if the cost of capital is 12%?

A) Yes, based only on the NPV.

B) No, based on the NPV and the IRR.

C) Yes, based on the NPV and the IRR.

Question #35 of 74

A T-bill with a face value of $100,000 and 140 days until maturity is selling for $98,000. What is the money market yield?

A) 2.04%.

B) 5.41%.

C) 5.25%.

Question #36 of 74

The effective annual yield (EAY) for a T-bill maturing in 150 days is 5.04%. What are the holding period yield (HPY) and money market yield (MMY) respectively?

A) 2.04%; 4.90%.

B) 5.25%; 2.04%.

C) 2.80%; 5.41%.

Question #37 of 74

Which of the following statements about money-weighted and time-weighted returns is *least* accurate?

A) The money-weighted return applies the concept of internal rate of return to investment portfolios.

B) If a client adds funds to an investment prior to an unfavorable market, the time-weighted return will be depressed.

C) If the investment period is greater than one year, an analyst must use the geometric mean to calculate the annual time-weighted return.

Question #38 of 74

The estimated annual after-tax cash flows of a proposed investment are shown below:

Year 1: $10,000

Year 2: $15,000

Year 3: $18,000

After-tax cash flow from sale of investment at the end of year 3 is $120,000

The initial cost of the investment is $100,000, and the required rate of return is 12%. The net present value (NPV) of the project is *closest* to:

A) $19,113.

B) -$66,301.

C) $63,000.

Question #39 of 74

A broker calls with a proposal to buy a Treasury bill (T-bill) with 186 days to maturity. He says the effective annual yield on the T-bill is 4.217%. What is the holding period yield if you hold the bill until maturity?

A) 2.02%.

B) 8.44%.

C) 2.13%.

Question #40 of 74

A Treasury bill has 40 days to maturity, a par value of $10,000, and was just purchased by an investor for $9,900. Its holding period yield is *closest* to:

A) 1.00%.

B) 1.01%.

C) 9.00%.

Question #41 of 74

An investor buys a $1,000 par value, 10.375% coupon, annual-pay bond for $1,033.44 and sells it one year later for $1,014.06. What is the holding period yield?

A) 8.22%.

B) 8.16%.

C) 8.14%.

Question #42 of 74

A Treasury bill has 40 days to maturity, a par value of $10,000, and is currently selling for $9,900. Its effective annual yield is *closest* to:

A) 1.00%.

B) 9.00%.

C) 9.60%.

Question #43 of 74

A T-bill with a face value of $100,000 and 140 days until maturity is selling for $98,000. What is its holding period yield?

A) 5.14%.

B) 2.04%.

C) 5.25%.

Question #44 of 74

A bond was purchased exactly one year ago for $910 and was sold today for $1,020. During the year, the bond made two semi-annual coupon payments of $30. What is the holding period return?

A) 18.7%.

B) 12.1%.

C) 6.0%.

Question #45 of 74

A Treasury bill (T-bill) with a face value of $10,000 and 137 days until maturity is selling for 98.125% of face value. Which of the following is *closest* to the bank discount yield on the T-bill?

A) 5.06%.

B) 4.56%.

C) 4.93%.

Question #46 of 74

An investor is considering investing in Tawari Company for one year. He expects to receive $2 in dividends over the year and feels he can sell the stock for $30 at the end of the year. To realize a return on the investment over the year of 14%, the price the investor would pay for the stock today is *closest* to:

A) $28.

B) $32.

C) $29.

Question #47 of 74

If an investor bought a stock for $32 and sold it one year later for $37.50 after receiving $2 in dividends, what was the holding period return on this investment?

A) 6.25%.

B) 17.19%.

C) 23.44%.

Question #48 of 74

An investor buys four shares of stock for $50 per share. At the end of year one she sells two shares for $50 per share. At the end of year two she sells the two remaining shares for $80 each. The stock paid no dividend at the end of year one and a dividend of $5.00 per share at the end of year two. What is the difference between the time-weighted rate of return and the money-weighted rate of return?

A) 9.86%.

B) 14.48%.

C) 20.52%.

Question #49 of 74

Assume an investor makes the following investments:

- Today, she purchases a share of stock in Redwood Alternatives for $50.00.
- After one year, she purchases an additional share for $75.00.
- After one more year, she sells both shares for $100.00 each.

There are no transaction costs or taxes. The investor's required return is 35.0%.

During year one, the stock paid a $5.00 per share dividend. In year two, the stock paid a $7.50 per share dividend.

The time-weighted return is:

A) 23.2%.

B) 51.4%.

C) 51.7%.

Question #50 of 74

An investor buys one share of stock for $100. At the end of year one she buys three more shares at $89 per share. At the end of year two she sells all four shares for $98 each. The stock paid a dividend of $1.00 per share at the end of year one and year two. What is the investor's money-weighted rate of return?

A) 6.35%.

B) 5.29%.

C) 0.06%.

Question #51 of 74

Williams Warehousing currently has a warehouse lease that calls for five annual payments of $120,000. The warehouse owner, who needs cash, is offering Williams a deal wherein Williams will pay $200,000 this year and then pay only $80,000 each of the remaining 4 years. (Assume that all lease payments are made at the beginning of the year.) Should Williams Warehousing accept the offer if its required rate of return is 9%, and why?

A) No, there is an additional $80,000 payment in this year.

B) Yes, there is a savings of $45,494 in present value terms.

C) Yes, there is a savings of $49,589 in present value terms.

Question #52 of 74

What is the effective annual yield for a Treasury bill priced at $98,853 with a face value of $100,000 and 90 days remaining until maturity?

A) 1.16%.

B) 4.79%.

C) 4.64%.

Question #53 of 74

What is the yield on a discount basis for a Treasury bill priced at $97,965 with a face value of $100,000 that has 172 days to maturity?

A) 2.04%.

B) 4.26%.

C) 3.95%.

Question #54 of 74

An analyst managed a portfolio for many years and then liquidated it. Computing the internal rate of return of the inflows and outflows of a portfolio would give the:

A) net present value.

B) time-weighted return.

C) money-weighted return.

Question #55 of 74

Which of the following is *most* accurate with respect to the relationship of the money-weighted return to the time-weighted return? If funds are contributed to a portfolio just prior to a period of favorable performance, the:

A) money-weighted rate of return will tend to be depressed.

B) money-weighted rate of return will tend to be elevated.

C) time-weighted rate of return will tend to be elevated.

Question #56 of 74

A Treasury bill, with 80 days until maturity, has an effective annual yield of 8%. Its holding period yield is *closest* to:

A) 1.70%.

B) 1.75%.

C) 1.72%.

Question #57 of 74

What is the effective annual yield of a T-bill that has a money market yield of 5.665% and 255 days to maturity?

A) 4.01%.

B) 5.79%.

C) 5.92%.

Question #58 of 74

On January 1, Jonathan Wood invests $50,000. At the end of March, his investment is worth $51,000. On April 1, Wood deposits $10,000 into his account, and by the end of June, his account is worth $60,000. Wood withdraws $30,000 on July 1 and makes no additional deposits or withdrawals the rest of the year. By the end of the year, his account is worth $33,000. The time-weighted return for the year is *closest to*:

A) 5.5%.

B) 7.0%.

C) 10.4%.

Question #59 of 74

Fisher, Inc., is evaluating the benefits of investing in a new industrial printer. The printer will cost $28,000 and increase after-tax cash flows by $7,000 during each of the next four years and $6,000 in each of the two years after that. The internal rate of return (IRR) of the printer project is *closest* to:

A) 12.0%.

B) 11.8%.

C) 11.6%.

Question #60 of 74

Robert Mackenzie, CFA, buys 100 shares of GWN Breweries each year for four years at prices of C$10, C$12, C$15 and C$13 respectively. GWN pays a dividend of C$1.00 at the end of each year. One year after his last purchase he sells all his GWN shares at C$14. Mackenzie calculates his average cost per share as [(C$10 + C$12 + C$15 + C$13) / 4] = C$12.50. Mackenzie then uses the internal rate of return technique to calculate that his money-weighted annual rate of return is 12.9%. Has Mackenzie correctly determined his average cost per share and money-weighted rate of return?

	Average cost	Money-weighted return
A)	Correct	Incorrect
B)	Incorrect	Correct
C)	Correct	Correct

Question #61 of 74

An investor expects a stock currently selling for $20 per share to increase to $25 by year-end. The dividend last year was $1 but he expects this year's dividend to be $1.25. What is the expected holding period return on this stock?

A) 31.25%.

B) 24.00%.

C) 28.50%.

Question #62 of 74

When Annette Famigletti hears that a baseball-loving friend is coming to visit, she purchases two premium-seating tickets for $45 per ticket for an evening game. As the date of the game approaches, Famigletti's friend telephones and says that his trip has been cancelled. Fortunately for Famigletti, the tickets she holds are in high demand as there is chance that the leading Major League Baseball hitter will break the home run record during the game. Seeing an opportunity to earn a high return, Famigletti puts the tickets up for sale on an internet site. The auction closes at $150 per ticket. After paying a 10% commission to the site (on the amount of the sale) and paying $8 total in shipping costs, Familgletti's holding period return is approximately:

A) 202%.

B) 191%.

C) 182%.

Question #63 of 74

A 10% coupon bond was purchased for $1,000. One year later the bond was sold for $915 to yield 11%. The investor's holding period yield on this bond is *closest* to:

A) 9.0%.

B) 18.5%.

C) 1.5%.

Question #64 of 74

A stock is currently worth $75. If the stock was purchased one year ago for $60, and the stock paid a $1.50 dividend over the course of the year, what is the holding period return?

A) 22.0%.

B) 27.5%.

C) 24.0%.

Question #65 of 74

An investor buys one share of stock for $100. At the end of year one she buys three more shares at $89 per share. At the end of year two she sells all four shares for $98 each. The stock paid a dividend of $1.00 per share at the end of year one and year two. What is the investor's time-weighted rate of return?

A) 0.06%.

B) 11.24%.

C) 6.35%.

Question #66 of 74

If the holding period yield on a Treasury bill (T-bill) with 197 days until maturity is 1.07%, what is the effective annual yield?

A) 1.99%.

B) 1.07%.

C) 0.58%.

Question #67 of 74

The holding period yield of a T-bill that has a bank discount yield of 4.70% and a money market yield of 4.86% and matures in 240 days is *closest to*:

A) 2.8%.

B) 3.2%.

C) 4.9%.

Question #68 of 74

A Treasury bill with a face value of $1,000,000 and 45 days until maturity is selling for $987,000. The Treasury bill's bank discount yield is *closest* to:

A) 10.40%.

B) 10.54%.

C) 7.90%.

Question #69 of 74

The financial manager at Kyser Jones is considering two mutually exclusive projects with the following projected cash flows:

Projected Cash Flows		
Year	**Project M**	**Project Z**
0	-$60,000	-$60,000
1	22,500	0
2	22,500	0
3	22,500	0
4	22,500	111,000

If Kyser Jones' required rate of return is 11%, which project would be chosen and why?

A) Both projects because their net present values are positive.

B) Project Z, because it has the higher net present value.

C) Project M, because it has the higher internal rate of return.

Question #70 of 74

Miranda Cromwell, CFA, buys &£2,000 worth of Smith & Jones PLC shares at the beginning of each year for four years at prices of &£100, &£120, &£150 and &£130 respectively. At the end of the fourth year the price of Smith & Jones PLC is &£140. The shares do not pay a dividend. Cromwell calculates her average cost per share as [(&£100 + &£120 + &£150 + &£130) / 4] = &£125. Cromwell then uses the geometric mean of annual holding period returns to conclude that her time-weighted annual rate of return is 8.8%. Has Cromwell correctly determined her average cost per share and time-weighted rate of return?

	Average cost	Time-weighted return
A)	Correct	Correct
B)	Incorrect	Correct
C)	Correct	Incorrect

Question #71 of 74

Which of the following statements *least accurately* describes the IRR and NPV methods?

A) When evaluating independent projects, the IRR and NPV methods yield the same accept/reject decisions.

B) When selecting between mutually exclusive projects, the project with the highest NPV should be accepted regardless of the sign of the NPV calculation.

C) The NPV tells how much the value of the firm has increased if you accept the project.

Question #72 of 74

The holding period yield for a T-Bill maturing in 110 days is 1.90%. What are the equivalent annual yield (EAY) and the money market yield (MMY) respectively?

A) 5.25%; 5.59%.

B) 6.90%; 6.80%.

C) 6.44%; 6.22%.

Question #73 of 74

Banca Hakala purchases two front row concert tickets over the Internet for $90 per seat. One month later, the rock group announces that it is dissolving due to personality conflicts and the concert that Hakala has tickets for will be the "farewell" concert. Hakala sees a chance to raise some quick cash, so she puts the tickets up for sale on the same internet site. The auction closes at $250 per ticket. After paying a 10% commission to the site on the amount of the sale and paying $10 in shipping costs, Hakala's one-month holding period return is approximately:

A) 144%.

B) 44%.

C) 139%.

Question #74 of 74

Which of the following is NOT a problem with the internal rate of return (IRR)?

A) Sometimes the IRR exceeds the cost of capital.

B) A higher IRR does not necessarily indicate a more-profitable project.

C) Non-normal cash flow patterns may result in multiple IRRs.
